1 What will be the output of the following code snippet? def func(a, b): return b if a == 0 else func(b % a, a) **print**(**func**(**30**, **75**)) a) 10 **b)** 20 c) 15 **d**) **0** Ans- (c) 2) numbers = (4, 7, 19, 2, 89, 45, 72, 22) sorted_numbers = sorted(numbers) even = lambda a: a % 2 == 0 even_numbers = filter(even, sorted_numbers) print(type(even_numbers)) a) Int b) Filter c) List d) Tuple **Ans- (b)** 3) As what datatype are the *args stored, when passed into a) Tuple b) List c) Dictionary d) none Ans-(a) 4) $set1 = \{14, 3, 55\}$ $set2 = \{82, 49, 62\}$

set3={99,22,17}

print(len(set1 + set2 + set3))a) 105 b) 270 c) 0 d) Error Ans- (d) 5) What keyword is used in Python to raise exceptions? a) raise b) try c) goto d) except Ans-(a) 6) Which of the following modules need to be imported to handle date time computations in Python? a) timedate b) date c) datetime d) time Ans- (c) 7) What will be the output of the following code snippet? print(4**3 + (7 + 5)**(1 + 1))a) 248 b) 169 c) 208 d) 233 Ans- (c) 8) Which of the following functions converts date to corresponding time in Python? a) strptime b) strftime c) both a) and b) d) None

Ans- (a)

| 9) The python tuple isin nature. |
|--|
| |
| a) mutable |
| b)immutable |
| c)unchangeable |
| d) none |
| Ans- (b) |
| 10) Theis a built-in function that returns a range object that consists series of integer numbers, whichwe can iterate using a for loop. |
| A. range() B. set() |
| C. dictionary{}D. None of the mentioned above |
| Ans- (A) |
| Question 11 |
| Amongst which of the following is a function which does not have any name? |
| A. Del functionB. Show functionC. Lambda functionD. None of the mentioned above |
| Ans- (D) |
| Question 12 |
| The module Pickle is used to |
| A. Serializing Python object structure B. De-serializing Python object structure C. Both A and B D. None of the mentioned above |
| Ans- (C) |
| Question 13 |
| Amongst which of the following is / are the method of convert Python objects for writing data in a binary file? |
| A. set() method B. dump() method C. load() method |

D. None of the mentioned above

Ans- (B)

Amongst which of the following is / are the method used to unpickling data from a binary file?

```
A. load()
```

- B. set() method
- C. dump() method
- D. None of the mentioned above

Ans-(A)

15.

A text file contains only textual information consisting of____.

- A. Alphabets
- B. Numbers
- C. Special symbols
- D. All of the mentioned above

```
Ans-(D)
```

16.

Which Python code could replace the ellipsis (...) below to get the following output? (Select all that apply.)

```
captains = {
   "Enterprise": "Picard",
   "Voyager": "Janeway",
   "Defiant": "Sisko",
}
```

Enterprise Picard,

Voyager Janeway

Defiant Sisko

- a) for ship, captain in captains.items(): print(ship, captain)
- b) for ship in captains: print(ship, captains[ship])
- c) for ship in captains:print(ship, captains)
- d) both a and b

Ans- (d)

17)

Which of the following lines of code will create an empty dictionary named captains?

```
a) captains = \{dict\}
```

- b) type(captains)
- c) captains.dict()
- d) captains $= \{\}$

"Defiant": "Sisko",

"Discovery": "unknown",

18) Now you have your empty dictionary named captains. It's time to add some data!

Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager": "Janeway", and "Defiant": "Sisko".

Which of the following code snippets will successfully add these key-value pairs to the existing captains dictionary?

```
a) captains { "Enterprise" = "Picard" }
    captains{"Voyager" = "Janeway"}
    captains{"Defiant" = "Sisko"}
    b) captains["Enterprise"] = "Picard"
    captains["Voyager"] = "Janeway"
    captains["Defiant"] = "Sisko"
    c) captains = {
       "Enterprise": "Picard",
       "Voyager": "Janeway",
       "Defiant": "Sisko",
     }
    d) None of the above
Ans-(c)
19) You're really building out the Federation Starfleet now! Here's what you have:
captains = {
 "Enterprise": "Picard",
 "Voyager": "Janeway",
```

Now, say you want to display the ship and captain names contained in the dictionary, but you also want to provide some additional context. How could you do it?

```
a) for item in captains.items():
       print(f"The [ship] is captained by [captain].")
     b) for ship, captain in captains.items():
       print(f"The {ship} is captained by {captain}.")
     c) for captain, ship in captains.items():
       print(f"The {ship} is captained by {captain}.")
     d) All are correct
Ans- (b)
 20)
 You've created a dictionary, added data, checked for the existence of keys, and iterated over it with
 a for loop. Now you're ready to delete a key from this dictionary:
 captains = {
 "Enterprise": "Picard",
 "Voyager": "Janeway",
 "Defiant": "Sisko",
 "Discovery": "unknown",
 }
 What statement will remove the entry for the key "Discovery"?
     a) del captains
     b) captains.remove()
     c) del captains["Discovery"]
     d) captains["Discovery"].pop()
Ans-(c)
```
